

ABSTRACT

5 Separate processors, a PDA processor, and a baseband  
processor are maintained in a PDA having an integrated telephone  
device. The PDA processor runs PDA related programs and a user  
interface for the telephone device. A link between the PDA  
processor and baseband processor transfers data and commands  
from the user interface to a phone control program executing on  
the baseband processor. The base band processor is connected to  
10 the telephone device, and the phone control program controls  
operation of the telephone device. The separation of processors  
reduces vulnerability of the telephone device to hacker rogue  
applications that invade or program crashes that occur on the  
PDA processor.
